## 1

### 1.1

LinkedList(T info):

```
Create a new node pointer newNode  
newNode.value  $\leftarrow$  info  
newNode.next  $\leftarrow$  NULL  
head  $\leftarrow$  newNode
```

### 1.2

~LinkedList():

```
nodePtr  $\leftarrow$  head  
while nodePtr  $\neq$  NULL do  
    nextNode  $\leftarrow$  nodePtr.next  
    delete nodePtr  
    nodePtr  $\leftarrow$  nextNode  
end while
```

### 1.3

void appendNode(T info):

```
Create a new node pointer newNode  
newNode.value  $\leftarrow$  info  
newNode.next  $\leftarrow$  NULL  
if head = NULL then  
    head  $\leftarrow$  newNode  
else  
    nodePtr  $\leftarrow$  head  
    while nodePtr.next  $\neq$  NULL do  
        nodePtr  $\leftarrow$  nodePtr.next  
    end while  
    nodePtr.next  $\leftarrow$  newNode  
end if
```

## 1.4

T& top():

```
return head.value
```

## 1.5

T& pop\_front():

```
tmpNode  $\leftarrow$  head  
tmpVal  $\leftarrow$  head.value  
head  $\leftarrow$  head.next  
delete tmpNode  
return tmpVal
```

## 1.6

bool empty():

```
if head = NULL then  
    return true  
else  
    return false  
end if
```

## 1.7

void insertNode(T info):

```
Create a new node pointer newNode  
newNode.value  $\leftarrow$  info  
newNode.next  $\leftarrow$  head.next  
head  $\leftarrow$  newNode
```

## 1.8

void deleteNode(T info, bool removeAll):

```
if head = NULL then  
    return  
end if  
if head = info then  
    Create a new node pointer newNode  
    newNode  $\leftarrow$  head.next  
    delete head  
    head  $\leftarrow$  newNode  
    if removeAll = false then  
        return  
    end if  
end if  
nodePtr  $\leftarrow$  head  
while nodePtr  $\neq$  NULL do
```

```

while nodePtr.value  $\neq$  info do
    prevNode  $\leftarrow$  nodePtr
    nodePtr  $\leftarrow$  nodePtr.next
end while
prevNode.next  $\leftarrow$  nodePtr.next
delete nodePtr
if removeAll = false then
    return
end if
end while

```

## 1.9

```

void displayList(void):
    nodePtr  $\leftarrow$  head
    while nodePtr  $\neq$  NULL do
        print nodePtr.value
        nodePtr  $\leftarrow$  nodePtr.next
    end while

```

## 1.10

```

int count(T val):
    count  $\leftarrow$  0
    nodePtr  $\leftarrow$  head
    while nodePtr  $\neq$  NULL do
        if nodePtr.value = val then
            count  $\leftarrow$  count + 1
        end if
        nodePtr  $\leftarrow$  nodePtr.next
    end while
    return count

```

## 1.11

```

int length():
    len  $\leftarrow$  0
    nodePtr  $\leftarrow$  head
    while nodePtr  $\neq$  NULL do
        len  $\leftarrow$  count + 1
        nodePtr  $\leftarrow$  nodePtr.next
    end while
    return len

```

## 1.12

```

ListNode *getNode(int i):
    count  $\leftarrow$  0

```

```

nodePtr ← head
while nodePtr ≠ NULL do
  if count = i then
    return nodePtr
  end if
  nodePtr ← nodePtr.next
end while

```

### 1.13

T& get(int i):

```

count ← 0
nodePtr ← head
while nodePtr ≠ NULL do
  if count = i then
    return nodePtr.value
  end if
  nodePtr ← nodePtr.next
end while

```

### 1.14

void clear():

```

nodePtr ← head
while nodePtr ≠ NULL do
  nextNode ← nodePtr.next
  delete nodePtr
  nodePtr ← nextNode
end while

```

### 1.15

void sortBySelection():

```

minPtr ← head
nodePtr ← head.next
prevNode ← head
while nodePtr ≠ NULL do
  if nodePtr.value < minPtr.value then
    minPtr ← nodePtr
    minPrevNode ← prevNode
  end if
  prevNode ← nodePtr
  nodePtr ← nodePtr.next
end while
if minPtr ≠ head then
  head ← minPtr
  minPrevNode.next ← minPtr.next
  minPtr.next ← head.next

```

```

end if
curPtr  $\leftarrow$  head
while curPtr.next  $\neq$  NULL do
    minPtr  $\leftarrow$  curPtr.next
    minPrevNode  $\leftarrow$  curPtr
    nodePtr  $\leftarrow$  minPtr.next
    prevNode  $\leftarrow$  minPtr
    while nodePtr  $\neq$  NULL do
        if nodePtr.value < minPtr.value then
            minPtr  $\leftarrow$  nodePtr
            minPrevNode  $\leftarrow$  prevNode
        end if
        prevNode  $\leftarrow$  nodePtr
        nodePtr  $\leftarrow$  nodePtr.next
    end while
    if minPtr = curPtr.next then
        curPtr  $\leftarrow$  curPtr.next
    else
        minPrevNode.next  $\leftarrow$  minPtr.next
        minPtr.next  $\leftarrow$  curPtr.next
        curPtr.next  $\leftarrow$  minPtr
        curPtr  $\leftarrow$  minPtr
    end if
end while

```

## 1.16

void sortByInsertion():

```

endPtr  $\leftarrow$  head
while endPtr.next  $\neq$  NULL do
    curPtr  $\leftarrow$  endPtr.next
    nodePtr  $\leftarrow$  head
    while nodePtr  $\neq$  curPtr and nodePtr.value < curPtr.value do
        prevNode  $\leftarrow$  nodePtr
        nodePtr  $\leftarrow$  nodePtr.next
    end while
    if nodePtr = head then
        endPtr.next  $\leftarrow$  curPtr.next
        curPtr.next  $\leftarrow$  head
        head  $\leftarrow$  curPtr
    else if nodePtr = curPtr then
        endPtr  $\leftarrow$  endPtr.next
    else
        endPtr.next  $\leftarrow$  curPtr.next
        curPtr.next  $\leftarrow$  nodePtr
        prevNode.next  $\leftarrow$  curPtr
    end if
end while

```

## 1.17

void reverse():

```
    prevNode ← head
    nodePtr ← head.next
    nextNode ← nodePtr.next
    while nextNode ≠ NULL do
        nodePtr.next ← prevNode
        prevNode ← nodePtr
        nodePtr ← nextNode
        nextNode ← nextNode.next
    end while
    nodePtr.next ← prevNode
    head ← nodePtr
```
